Bulletin No.2 - May, 1918.

In sharp contrast to the previous year the present season has been highly favorable for bird-life, and it now seems probable that large numbers of young will be successfully reared. Though the number of species noted is somewhat less than usual, owing probably to fewer observations in the field, the commoner kinds do not seem to have diminished. Up to the present time, (May 20) no marked warbler-waves have been noticed, and migrants of this order have been unusually few.
